HEADINGS	1

Audit evidence

SCORECARD READY

HTTP response VERIFIED

HTTP 200 · The page was requested directly at this address and returned this response. Final URL after any redirects: <https://dhvac.com/heating-and-cooling-waterford-mi/the-nine-best-heating-and-cooling-contractors-in-metro-detroit/>

Indexing directives OBSERVED

follow, index, max-snippet:-1, max-video-preview:-1, max-image-preview:large · This directive was found in the page's meta tags or response headers, and tells search engines whether they may index this page.

Canonical URL OBSERVED

<https://dhvac.com/heating-and-cooling-waterford-mi/the-nine-best-heating-and-cooling-contractors-in-metro-detroit/> · A canonical tag tells search engines which URL is the authoritative version of a page. Google treats it as a strong hint, not a guarantee, and can still choose a different URL.

Search metadata OBSERVED

Title present · description present · This confirms a title and description exist in the code. Google often rewrites these when generating the actual search result snippet.

Contact routes OBSERVED

1 phone link · 1 email link · 0 forms · Only clickable phone (tel:) and email (mailto:) links are counted, along with HTML forms. A phone number written as plain text, without a clickable link, will not register as a working contact route for mobile visitors.

Mobile performance NOT MEASURED

Not measured · Google PageSpeed is not connected for this report, so mobile performance is intentionally left unmeasured rather than estimated.

SOURCE SCORECARD

Separate signals. Peer benchmark pending.

Website structure

DEVELOPING

70

On this page, the page has exactly one H1 heading, which is the recommended structure; 9 H2 and 14 H3 subheadings break up the content, and 12 semantic layout elements (such as <main>, <nav>, or <section>) were found in the markup. The page has a substantial amount of visible text, a mobile viewport tag is present, and 166 of 166 images (100%) have alt text.

Capped at 70 because we can only review the raw HTML. We cannot see how the page actually looks or behaves for a real visitor, or confirm mobile usability firsthand.

SEO health

70

DEVELOPING

On this page, the page title is 54 characters, within the ideal 30-60 character range, and the meta description is 168 characters, outside the ideal 100-165 character range. A canonical tag is present, an indexing directive ("follow, index, max-snippet:-1, max-video-preview:-1, max-image-preview:large") was found and does not block indexing, and a sitemap file is reachable.

Capped at 70 because on-page HTML cannot show actual search rankings, impressions, clicks, or how much qualified traffic the page receives.

Local relevance

55

WEAK

The page text contains 2 location-related terms and 18 service-related terms. This reflects wording only; it does not confirm a verified service area or business location.

Capped at 55 because wording alone is not proof of a real, verified service area. That requires confirmation from a verified Google Business Profile or similar source.

Conversion evidence

62

DEVELOPING

The page has 1 clickable phone link, 1 clickable email link, 0 contact forms, and 5 call-to-action phrases (such as "call now" or "get a quote"), captured directly from the HTML.

Capped at 65 because HTML alone cannot confirm whether these contact options are visible without scrolling, whether the form actually submits, whether calls are answered, or whether leads convert into paying customers.

Trust evidence

45

WEAK

Trust-related wording found on the page: licensed, insured, reviews, experience. Structured data types detected in the code: none. These are mentions and markup only — the underlying claims are not independently verified.

Capped at 69 because public HTML cannot verify claims like licensing, insurance, awards, or customer outcomes — those need a third-party or verified source.

Technical foundations

70

DEVELOPING

On this page, the page loads over HTTPS; a mobile viewport tag is present; a page language is declared ("en-US"); a canonical link is present; robots.txt is reachable; and a sitemap file is reachable.

Capped at 70 because this does not include page speed, uptime history, crawl-budget usage, or real-user performance data — those need ongoing monitoring, not a one-time HTML capture.

Overall score: not measured · commercial valuation: not measured

Once enough comparable businesses are audited, scores here will be percentile-ranked against other companies in the same trade and market — not against every website on the internet. An accurate valuation requires financial records or verified commercial data. Website HTML alone cannot support a valuation estimate.

WHAT THE BUSINESS OWNER SEES NEXT

Evidence first. Clear actions second.

- 01 Run this page through Google PageSpeed to measure real mobile performance before making any speed claims; this audit intentionally does not estimate it.
- 02 Connect a verified Google Search Console property to see real clicks, impressions, click-through rate, and average search position for this page.
